

Credit Card & Check Processing

INTEGRATED with Sage 300 (Sage ERP Accpac)

Currently over 98% of end-users who accept and process credit cards and electronic checks, do so outside and separate from their Accpac systems at the time of sale.* This sales data is then keyed into Accpac a second time for reconciliation purposes which not only wastes time and labor but also greatly increases the likelihood of costly data entry errors and security breaches of cardholder data.

While your company may already accept credit cards and checks, you can now accept and process them directly in Order Entry, Accounts Receivable and/or eCommerce Web Store with Paytelligence. Paytelligence is the only fully integrated "PCI PA-DSS Validated" credit card and electronic check processing solution for Sage ERP Accpac customers that eliminates the need to rekey transaction data and streamlines operations with speed, accuracy, ease-of-use and enhanced security.

Speed Up Collections, Receivables & Cash Flow

In today's economic climate, it's more important than ever to provide your customers with convenient and flexible payment options. Offering your customers the ability to pay via credit card, electronic check, ACH or to set them up with an automatic recurring billing or a customized payment plan ensures that you not only get paid quickly, securely and on-time, but that you also greatly reduce the costs and hassles associated with collections. Paytelligence's "all-in-one" integrated solution allows your company to:

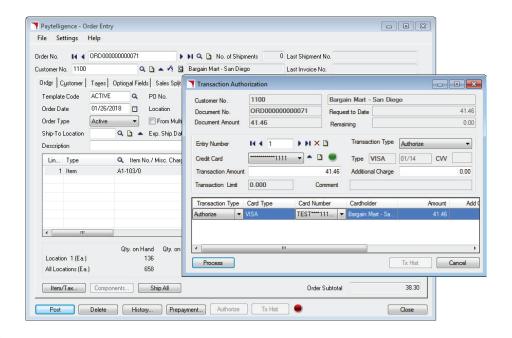

- Accept All Major Credit Cards
- Process Checks Electronically
- Integrate Web Store Options
- Eliminate Double Entry of Data
- Create Payment Plans
- Automate Billing & Collections

*Based on InstaPAY International's ongoi ng research & analysis of the Sage ERP Accpac market from June 2006 to 2011 .

Streamline Payment Handling With Integration

- **Lower Payment Processing Costs:** Paytelligence significantly reduces the costs of processing payments by automating the approval, collection and tracking of credit cards, debit cards and electronic checks directly in Accpac.
- Reduce Delinquencies: With traditional billing methods your company may experience high delinquencies. This results from customers paying their bill "when they get around to it." When their payment method is automatic, the bill gets paid on time which means you get paid on time. No more waiting for slow payers or checks to arrive in the mail.
- Increase Sales & Customer Retention: Paytelligence gives your customers the option to Buy-it-Now. You'll close sales faster and your time to cash will be reduced. Additionally, automated payments increase customer retention. Your customers do not have to make the decision to pay each month. Revenues stay high even during slow times.
- **Reduce Data-Entry & Errors:** Manual data entry is time-consuming and prone to errors. Paytelligence eliminates much of the manual entry and duplication of work, as well as providing enhanced security of cardholder data.
- Improve Reporting & Access to Information: Paytelligence includes many common reports and extensive transactional drill-down capabilities, giving you access to critical information when you need it.
